Contents to volume 61

Computational physics	*Issue*	*Page*
Nadrchal, J. Editorial: Modern methods of computer applications	1&2	1
Keravnou, E.T. What is a deep expert system? An analysis of first-generation limitations and a review of second-generation architectures	1&2	3
McDonnell, J. Domain modelling in second-generation expert systems	1&2	13
Fitch, J. The symbolic-numeric interface	1&2	22
Cabrol, D. Applications of Prolog to represent physical and chemical objects – a tutorial introduction	1&2	34
Humpert, B. Solving problems with automated reasoning, expert systems and neural networks	1&2	58
Horacek, H. Natural language processing	1&2	76
Gliss, B. Database user interfaces in a scientific environment	1&2	93
Zanarini, P. KUIP: the user interface of PAW	1&2	103
Mess, K.-H. Accelerator control	1&2	115
Merazzi, S. The ASTRID system: an example of an integrated numerical analysis system	1&2	133
Reid, I. Interfaces to numerical packages	1&2	141
Einarsson, B. Application of mixed language programming	1&2	150
Brandt, J. Compter-aided production of scientific documents	1&2	163
Wonneberger, R. Structured document processing: the LaTeX approach	1&2	177
Partl, H. How to make TeX and LaTeX international	1&2	190

Computational physics (continued)	*Issue*	*Page*
Eickel, J. Logical and layout structures of documents	1&2	201
Krönert, G. Importance of the ISO standard 8613 for document interchange. Basic standard, functional standards, initial experience, benefits	1&2	209
Bok, J., I. Barvík, P. Praus, P. Heřman and D. Čermáková Integrated software packages in the physical laboratory	1&2	219
Drska, L., R. Liska and M. Sinor Two practical packages for computational physics – GCPM, RLFI	1&2	225
Hřebíček, J., J. Kučera, P. Švenda and V.A. Vasilenko IDA – interactive data approximation package	1&2	231
Grosz, T., Gy. Rubin and A. Sandor PC controlled multi-dimensional data-collection system for a double time of flight (TOF) neutron spectrometer	1&2	234
Hall, B.D. A general-purpose interface system for the laboratory	1&2	239
Kerpedjiev, S.M. Transformation of weather forecasts from textual to cartographic form	1&2	246
Sklenář, I. and V. Kříž Computer aided lexicography	1&2	257
Pacher, P., G. Márk, L. Udvardi and I. Varga Teaching physics by means of computer modeling	1&2	260
Monjoie, F.S. and H.P. Garnir The University of Liège user interface for laboratory experiment control	1&2	267
Biller, P. and F. Petruccione Algorithms for the simulation of network models of the Yamamoto type	3	279
Müller-Plathe, F. Parallelising a molecular dynamics algorithm on a multi-processor workstation	3	285
Du, M.L. A note on Cooley's energy correction formula	3	294
Freire, J.J. and A. Rey Lower bounds for the intrinsic viscosity of flexible polymers. Comparison with Brownian dynamics simulation results for different types of chains	3	297
Hoek, J. Lattice topological charges and the H-gauge	3	304
Wittmann, H.-P. and K. Kremer Vectorized version of the bond fluctuation method for lattice polymers	3	309
Lai, S.-T. and Y.-N. Chiu A note on Biedenharn's triple correlation-angle functions	3	331
Lai, S-T. and Y.-N. Chiu Exact computation of the 3-*j* and 6-*j* symbols	3	350

Computer programs in physics

	Issue	*Page*
Rycerz, Z.A. Molecular dynamics simulation program of order N for condensed-matter systems. II. MDSPNL: pyramid with neighbour list, short-range interactions	3	361
Styer, D.F. Subroutine library for partial differential approximants	3	374
Yokota, T., T. Yano, M. Otsuka and S. Matsushima A high-speed method for solving eigenvalue problems: use of the spline function in Milne's method	3	387
Castellano, M., G. De Cataldo, N. Giglietto, E. Nappi and P. Spinelli A Monte Carlo program to design a multiple module transition radiation detector	3	395
Nomura, T., M. Ramek and B. Gruber Programs for symmetry adaption coefficients for semisimple symmetry chains: the completely symmetric representations	3	410
Gielen, S. Book review	3	433
Jones, I.P. Book review	3	436
Flyrbjerg, H. Book review	3	437
